

COUNTRY INDICATORS AND SDGS

TOTAL ENERGY SUPPLY (TES)

Total Energy Supply (TES)	2015	2020
Non-renewable (TJ)	251 405	256 368
Renewable (TJ)	175 124	162 464
Total (TJ)	426 529	418 832
Renewable share (%)	41	39

Growth in TES	2015-20	2019-20
Non-renewable (%)	+2.0	-7.7
Renewable (%)	-7.2	-9.8
Total (%)	-1.8	-8.5

Primary energy trade	2015	2020
Imports (TJ)	255 913	282 495
Exports (TJ)	8 455	7 327
Net trade (TJ)	- 247 458	- 275 168

Imports (% of supply)	60	67
Exports (% of production)	5	5
Energy self-sufficiency (%)	41	38

Total energy supply in 2020

Renewable energy supply in 2020

RENEWABLE ENERGY CONSUMPTION (TFEC)

Renewable TFEC trend

Consumption by sector	2015	2020
Industry (TJ)	64 210	74 690
Transport (TJ)	0	0
Households (TJ)	105 517	78 410
Other (TJ)	28 551	29 901

Renewable energy consumption in 2020

ELECTRICITY CAPACITY

Installed capacity trend

Renewable capacity in 2022

Net capacity change (GW)

Net capacity change in 2022 (MW)

Capacity utilisation in 2021 (%)

ELECTRICITY GENERATION

Generation in 2021	GWh	%
Non-renewable	8 190	49
Renewable	8 580	51
Hydro and marine	7 215	43
Solar	557	3
Wind	645	4
Bioenergy	163	1
Geothermal	0	0
Total	16 770	100

Per capita electricity generation (kWh)

Electricity generation trend

ENERGY AND EMISSIONS

Energy-related CO₂ emissions by sector

Elec. & heat generation CO₂ emissions in

Avoided emissions from renewable elec. & heat

Avoided emissions based on fossil fuel mix used for power

CO₂ emission factor for elec. & heat generation

Calculated by dividing power sector emissions by elec. + heat gen.

Distribution of solar potential

Distribution of wind potential

Biomass potential: net primary production

Indicators of renewable resource potential

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

Onshore wind: Potential wind power density (W/m^2) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

Biomass: Net primary production (NPP) is the amount of carbon fixed by plants and accumulated as biomass each year. It is a basic measure of biomass productivity. The chart shows the average NPP in the country (tC/ha/yr), compared to the global average NPP of 3-4 tonnes of carbon

Sources: IRENA statistics, plus data from the following sources: UN SDG Database (original sources: WHO; World Bank; IEA; IRENA; and UNSD); UN World Population Prospects; UNSD Energy Balances; UN COMTRADE; World Bank World Development Indicators; EDGAR; REN21 Global Status Report; IEA-IRENA Joint Policies and Measures Database; IRENA Global Atlas; and World Bank Global Solar Atlas and Global Wind Atlas.

Additional notes: Capacity per capita and public investments SDGs only apply to developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided emissions from renewable power is calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels. In countries and years where no fossil fuel generation occurs, an average fossil fuel emission factor has been used to calculate the avoided emissions.

These profiles have been produced to provide an overview of developments in renewable energy in different countries and areas. The IRENA statistics team would welcome comments and feedback on its structure and content, which can be sent to statistics@irena.org.
